RESEARCH RADAR

10 to 15-Minute Pitch Deck & Presentation Script (Simple Words)

> ***THE ONE-SENTENCE HOOK:***
> ***'Research Radar turns 3 months of painful research paper reading into 10 minutes of crystal-clear answers, side-by-side comparisons, and ready-to-run experiments.'***

Slide 1: Introduction & The Core Question (1 Min)

What to say: 'Good morning/afternoon everyone. If you have ever had to write a project report, a thesis, or conduct an academic literature review, how much time did you waste downloading 50 PDFs, skimming 30-page papers, and manually copying numbers into an Excel spreadsheet? For almost every student and researcher, that process takes weeks or months. Today, we are presenting **Research Radar**—a smart cloud co-pilot that turns that entire painful process into a 2-second search.'

Slide 2: The Real-World Problem (2–3 Mins)

Why is academic research broken today? Every researcher suffers from 3 major headaches:

1. **Information Overload:** Over 3 million peer-reviewed papers are published every year. Searching Google Scholar gives you 5,000 PDF links with no clue where to start.
2. **The 'Excel Spreadsheet' Nightmare:** Comparing numbers between papers requires opening 20 browser tabs and manually typing numbers into a spreadsheet. It is slow, tedious, and error-prone.
3. **ChatGPT Hallucinations:** Asking general AI models for research help is dangerous because AI frequently invents fake paper titles, fake authors, and made-up numbers that ruin academic credibility.
4. **Hidden Contradictions:** Paper A says an approach achieves 95% efficiency; Paper B tested it under real temperatures and found it fails completely. Researchers miss these contradictions until their own lab experiment fails.

Slide 3: The Solution — What Research Radar Does (2 Mins)

Think of Research Radar as a **smart GPS for scientific knowledge** across all engineering branches (Computer Science, Mechanical, Civil, Electrical, Electronics, and Chemical):

- **Instant Topic Maps:** Type any research question, and in 2 seconds it connects the relevant peer-reviewed papers into an organized topic map.
- **Side-by-Side Comparison Matrix:** Automatically places benchmark numbers side-by-side (like comparing phone specs on Amazon!).
- **100% Fact-Checked Evidence:** Every finding includes the exact verbatim quote and page number linked directly to the publisher's registered DOI.
- **Contradiction Spotter:** Instantly flags where two papers disagree so you don't repeat prior mistakes.
- **Research Gap Kanban Board:** Identifies what has NOT been solved yet, and provides a ready-to-test experiment protocol so researchers know what to do next.

Slide 4: How We Solved It — Cloud Architecture (2 Mins)

Instead of building a fragile prototype on a local computer, we built Research Radar natively on the **Salesforce Lightning Platform (PaaS)**:

- **Enterprise Cloud Reliability:** Runs on high-availability cloud infrastructure with zero server maintenance, automated backups, and 99.9% uptime.

• **Relational Data Integrity (ACID):** All 7 custom objects (Maps, Papers, Metrics, Quotes, Contradictions, Gaps) are relationally linked. When a paper is updated, all comparisons update automatically.

• **Fast Modern Interface:** Built with Lightning Web Components (LWC) using open web standards for instant browser performance and responsive design.

Slide 5: Live Demo Walkthrough (4–5 Mins)

During the live demo, showcase the 4 primary user experiences:

1. **The Executive Dashboard:** Show the 4 KPI cards and demonstrate the branch filter buttons (All, Chemical, Mechanical, Civil, EEE, ECE).
2. **One-Click Topic Synthesis:** Type a topic (e.g. *'Serverless cold-start latency'*), click 'Generate Research Map', and watch the 4-step pipeline create a research map in 2 seconds.
3. **The Comparison Matrix:** Click 'Open Workspace' and show how benchmark numbers from multiple papers appear side-by-side cleanly.
4. **The Evidence Inspector:** Click a finding to show the verbatim quote, page number, and confidence score.
5. **The Gap Kanban Board:** Show how unsolved problems are turned into experiment cards that researchers can drag through validation stages.

Slide 6: Why Research Radar Beats Competitors (2 Mins)

How do we stand out against existing tools?

Capability	Google Scholar	ChatGPT / AI	Connected Papers	Research Radar
Gives Direct Answers	No (links only)	Hallucinates fake data	No (bubble graph only)	**Yes (Fact-Checked)**
Side-by-Side Comparison	No (manual Excel)	No (unstructured text)	No metrics extracted	**Yes (Instant Matrix)**
Spots Contradictions	No	No	No	**Yes (Auto-Flagged)**
Turns Gaps into Experiments	No	No	No	**Yes (Kanban Board)**
Audit Trail & Trust	Yes (PDF files)	None (Zero proof)	Yes (citations)	**Yes (Quote & DOI link)**

Slide 7: Conclusion & Wrap-up (1 Min)

Closing Statement: 'Research drives human innovation—from electric vehicles to renewable energy and artificial intelligence. Yet researchers waste almost half their time doing repetitive manual reading, searching, and copying numbers into spreadsheets. Research Radar solves this problem with enterprise cloud computing, turning weeks of frustration into minutes of actionable discovery. Thank you, and we look forward to your questions!'
